

I'll bet that's your favorite page headline, right? Okay, so here's the scoop: Matt Kloskowski has, over the past few years, gained a reputation as the Lightroom "Presets Ninja." So, I asked him if I could share a bunch of his best Lightroom Develop module presets here with you. My sincere thanks to Matt for letting me share these with you.

Bonus: 24 Cool Lightroom Develop Module Presets

Step One:

First, you'll need to download the presets, and you'll find them right in the same folder you downloaded with this bonus chapter. There are actually more than 24 presets in the folder, though, because there are some sharpening presets, as well as alternate versions of some (like light, medium, and strong, or color variations).

Step Two:

Once they're downloaded, go to Lightroom's Develop module, to the Presets panel in the left side Panels area, and Right-click on the User Presets collection. This brings up a pop-up menu (shown here), and all you need to do now is choose **Import**, navigate to the presets you just downloaded from the book's site, and then click Import, and now these presets will appear in your User Presets collection. To see a preview of any preset, just hover your cursor over it in the collection, then look up at the Navigator panel at the top of the left side Panels area and you'll see what the currently selected photo would look like if you applied the preset. When you find one that looks good to you, you're just one click away from having that look. Enjoy!
